How to use Sales CRM

A short tour of what each part of the CRM is for and how to use it. Every section has links that open the app in the right place.

Live demo: salescrm.thomalabs.com

01 ## Find your way around

The sidebar has every section, with the saved views below them. Whatever you filter or open goes into the URL, so any view can be bookmarked or shared.

02 ## Prioritize your accounts

The companies table shows each account's pipeline, win probability and last interaction, worked out from its deals and activities.

03 ## Move deals through the pipeline

The board has a column per stage. Company metrics come from their deals, so moving a card updates the table and the forecast.

04 ## Check the quarter's forecast

The forecast answers the question every sales manager asks: will we hit the number? It adds up what's won and what's expected for this quarter or the next.

05 ## Know who you're selling to

Contacts are the people at each account and their role in the purchase: who decides, who champions you, who could stand in the way.

06 ## Plan the next step

Activities are the calls, meetings, emails and tasks with each account. Every open deal should have a next step.

07 ## Automate outreach

A sequence is a series of emails, calls and tasks on set days. Contacts go through it until they reply. In this demo, emails aren't really sent.

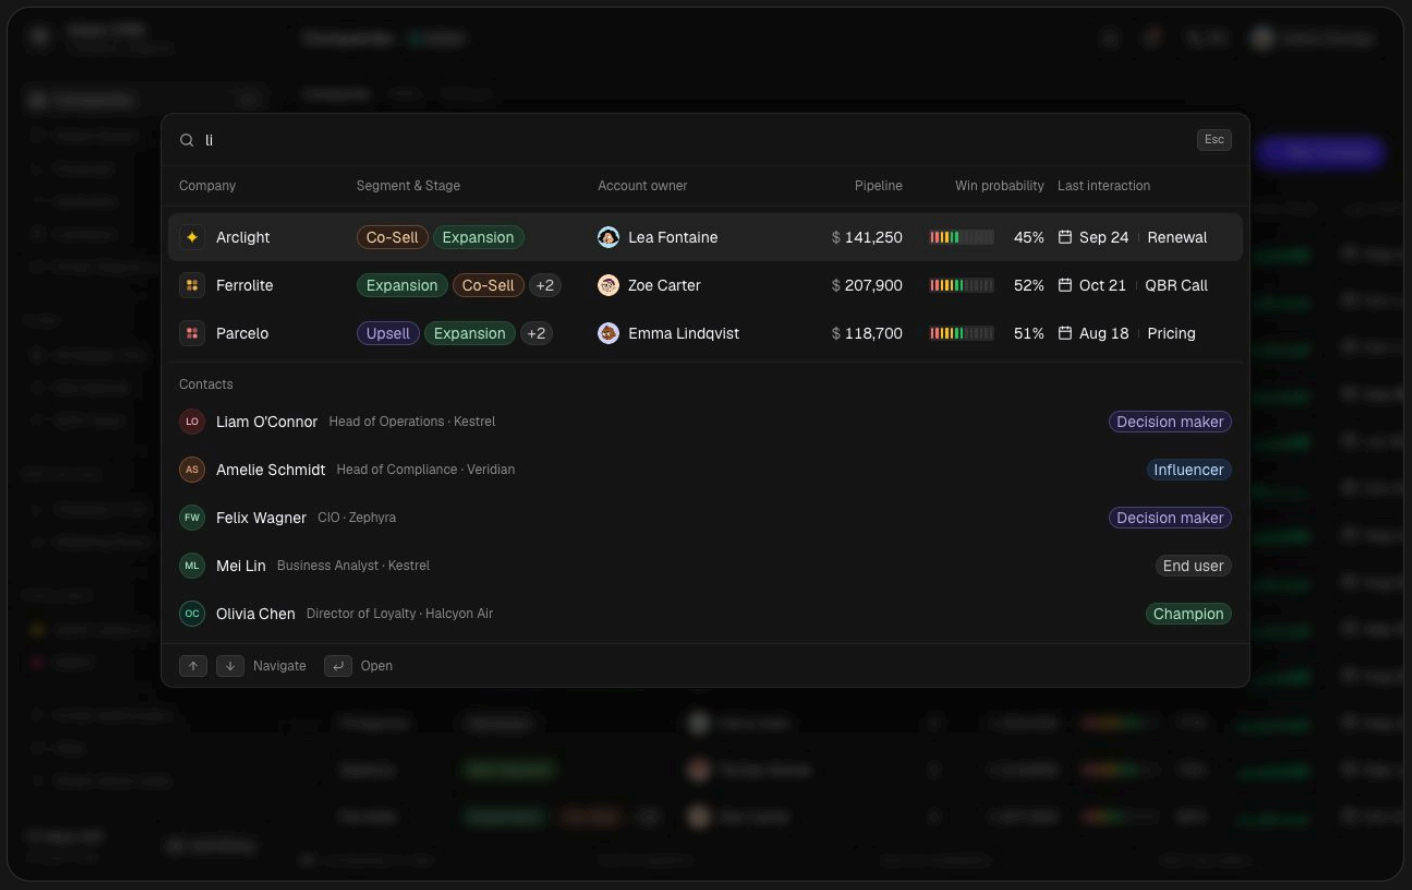

08 ## About this demo

Everything runs in your browser, with fictional companies and people.

01

Find your way around

The sidebar has every section, with the saved views below them. Whatever you filter or open goes into the URL, so any view can be bookmarked or shared.

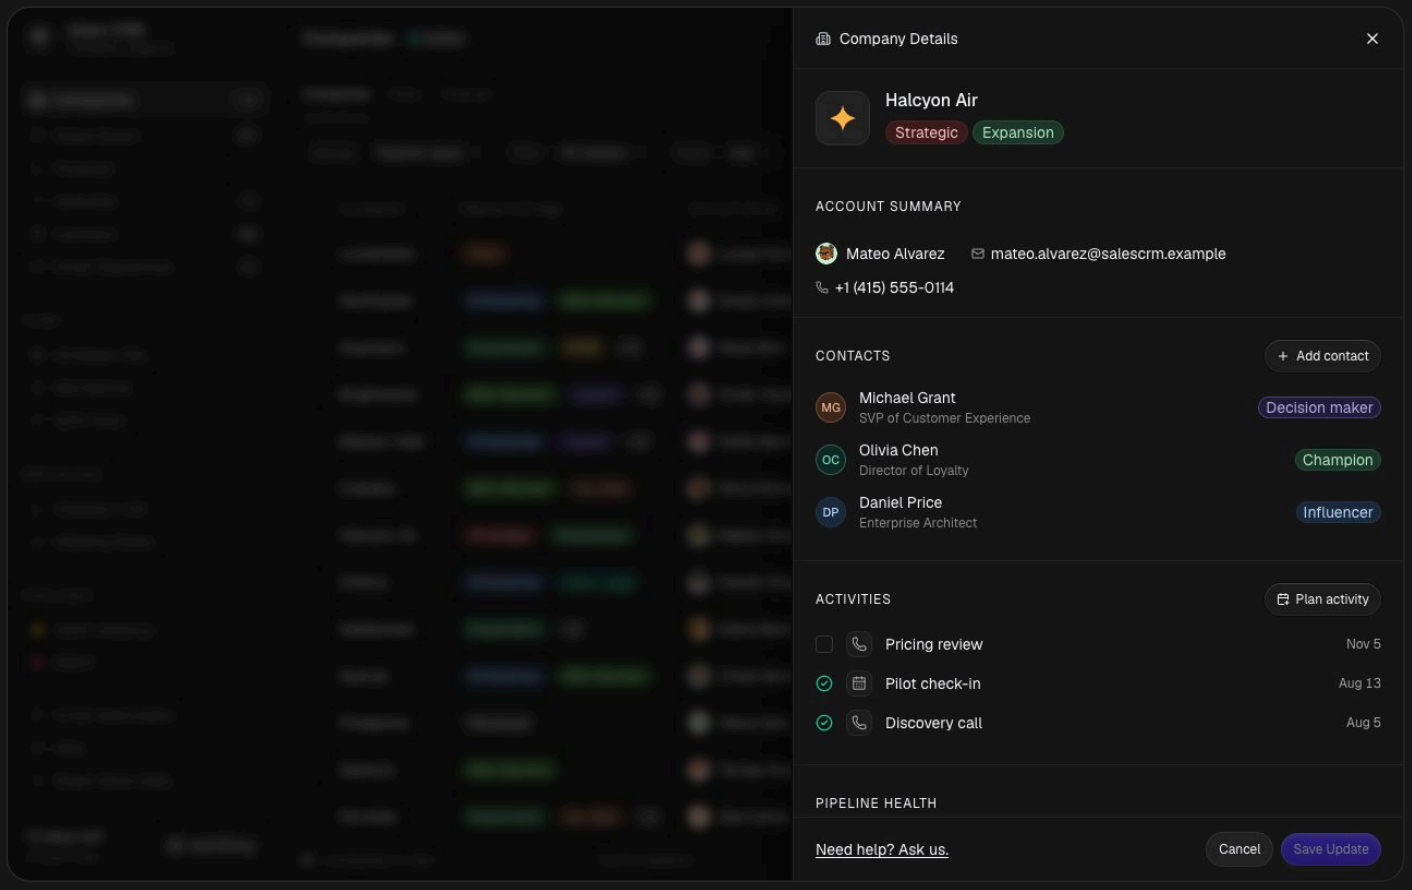

1. Switch between **Companies**, **Deals** and **Forecast** with the tabs at the top.
2. Press `⌘K` or `/` to search companies and people from anywhere.
3. Use the saved views in the sidebar: a team, a region, deals closing this quarter or slipping deals.
4. Change the language with **EN** or **ES** in the header. The page and its filters stay as they are.

02

Prioritize your accounts

The companies table shows each account's pipeline, win probability and last interaction, worked out from its deals and activities.

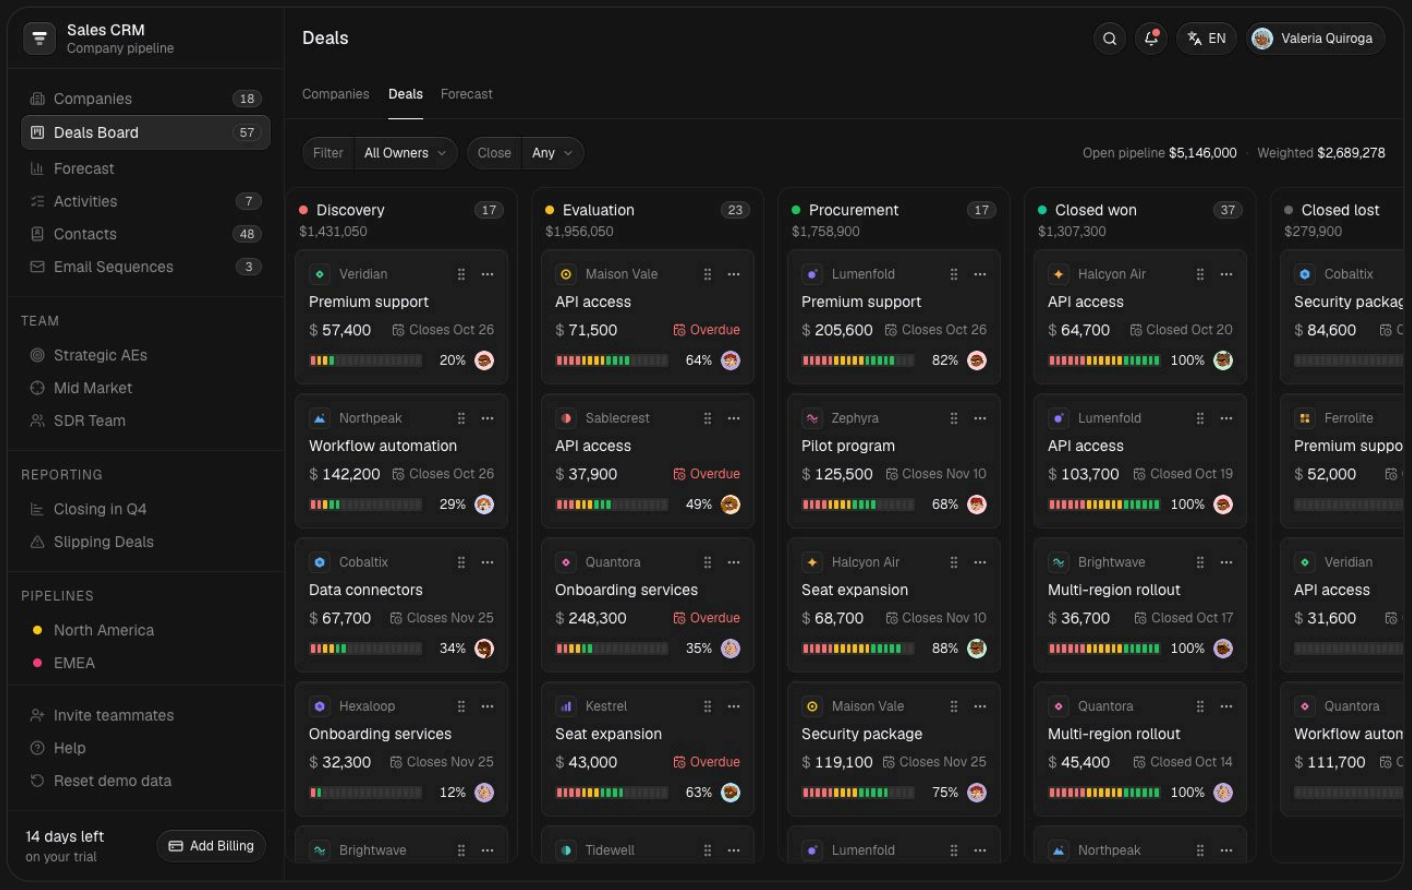

1. Sort by clicking a column header, or with **Sort by**.
2. Narrow the list with the owner, stage and last activity filters. **Reset** clears them.
3. Click a company to open its sheet: contacts, activities, pipeline health, deals and score cards.
4. Select rows to reassign or delete them together, with undo, or export the view to CSV.

03

Move deals through the pipeline

The board has a column per stage. Company metrics come from their deals, so moving a card updates the table and the forecast.

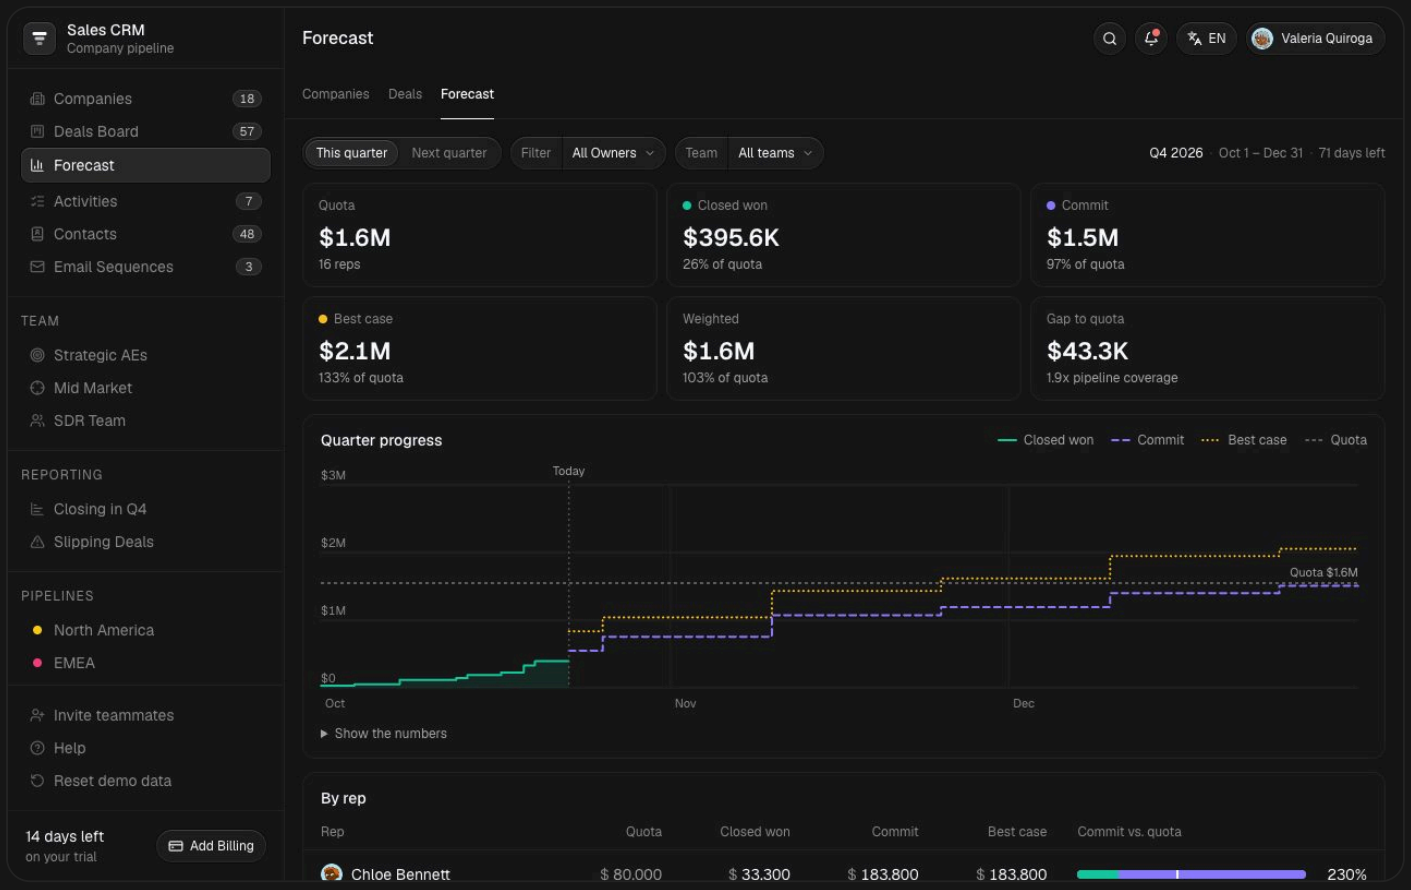

1. Drag a card to another stage. On a phone, press and hold it first.
2. From the keyboard, focus a card's handle, press `Space`, move it with the arrow keys and press `Space` again.
3. Or open the card's ⋯ menu and choose a stage under **Move to**.
4. Click a card to edit the deal: amount, close date, stage, probability and forecast category.

04

Check the quarter's forecast

The forecast answers the question every sales manager asks: will we hit the number? It adds up what's won and what's expected for this quarter or the next.

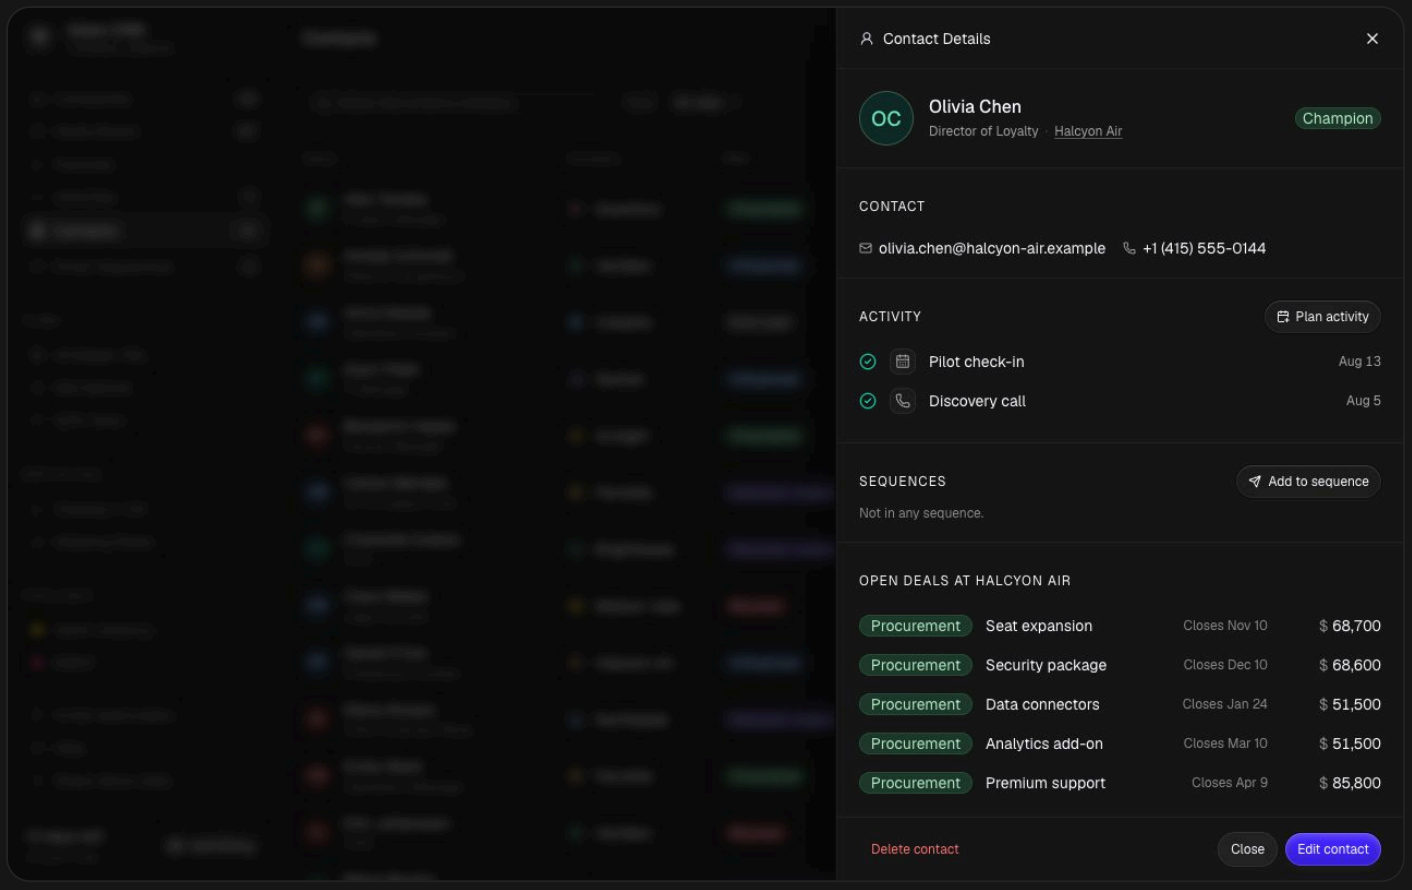

1. Read the totals: quota, closed won, **Commit**, **Best case**, weighted pipeline and what's left to reach the quota.
2. Follow the chart: won so far, and where Commit and Best case lead by the end of the quarter. **Show the numbers** has the same data as a table.
3. Compare reps under **By rep**. Clicking a name narrows the whole forecast to them.
4. From a deal's ⋯ menu, change its forecast category or push it to the next quarter.

05

Know who you're selling to

Contacts are the people at each account and their role in the purchase: who decides, who champions you, who could stand in the way.

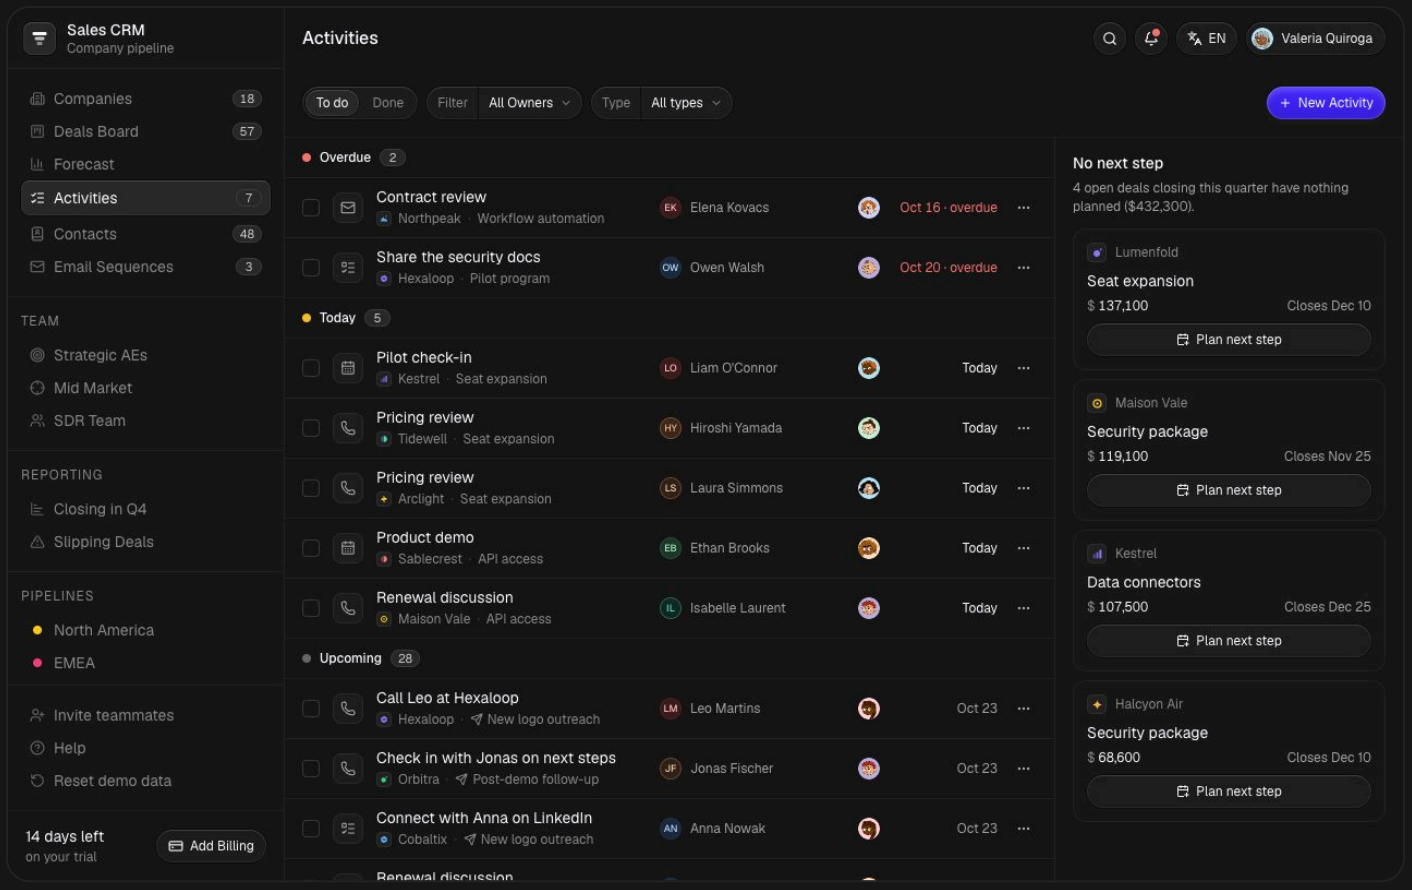

1. Search by name, title, email or company, and filter by buying role.
2. Open a contact to see their details, the account's open deals and their colleagues.
3. Each company's sheet lists its buying committee, decision makers first.
4. Add someone with **New Contact**, or from a company's sheet with **Add contact**.

06

Plan the next step

Activities are the calls, meetings, emails and tasks with each account. Every open deal should have a next step.

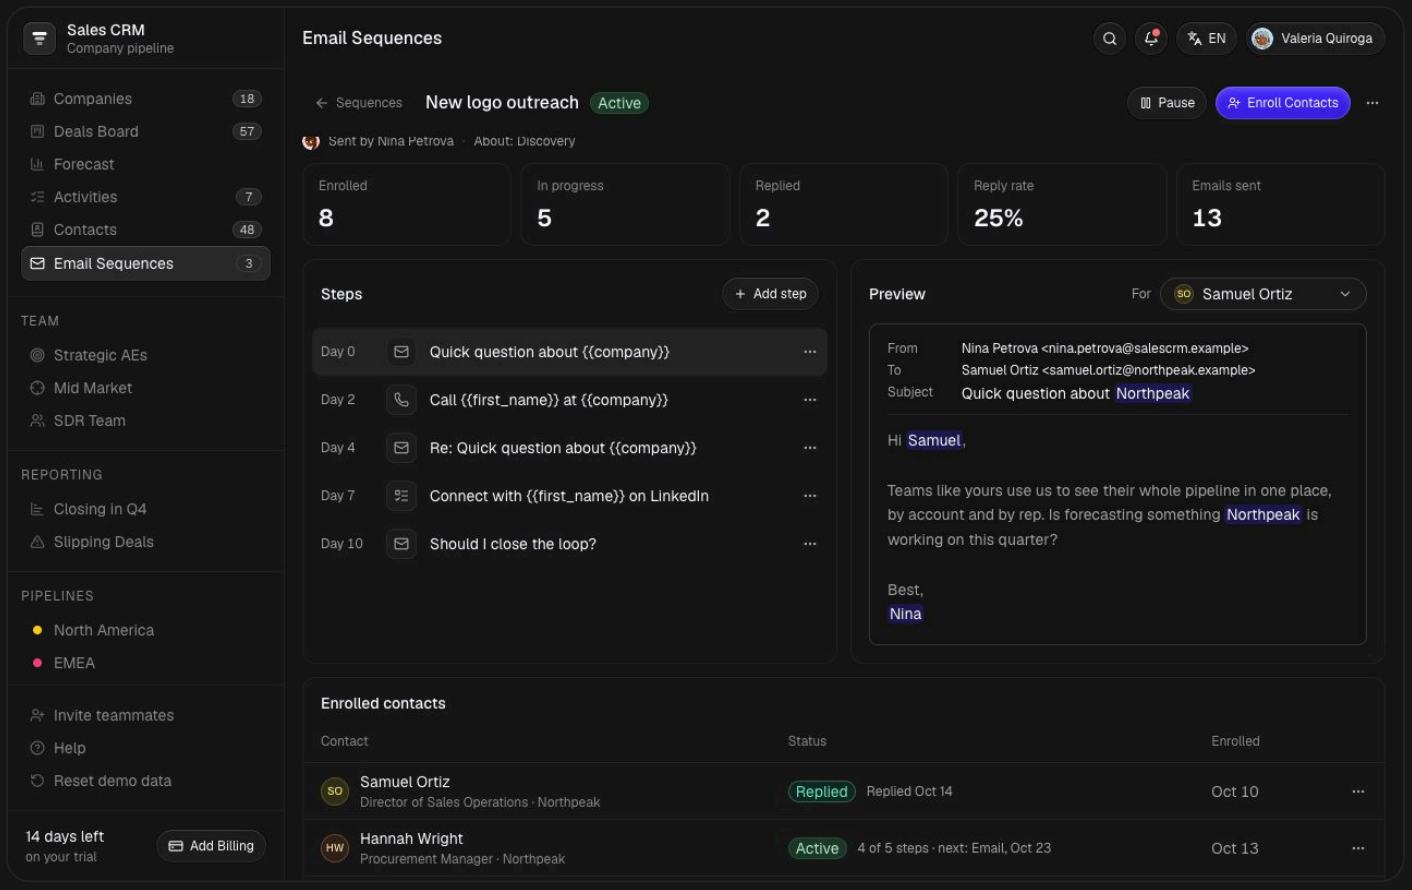

1. Work through **To do**: overdue first, then today and upcoming. Check one off when it's done.
2. A completed activity becomes the company's last interaction in the table.
3. **No next step** lists the deals closing this quarter with nothing planned. **Plan next step** fixes that in one go.
4. Log something that already happened with **New Activity** and **Already done**.

07

Automate outreach

A sequence is a series of emails, calls and tasks on set days. Contacts go through it until they reply. In this demo, emails aren't really sent.

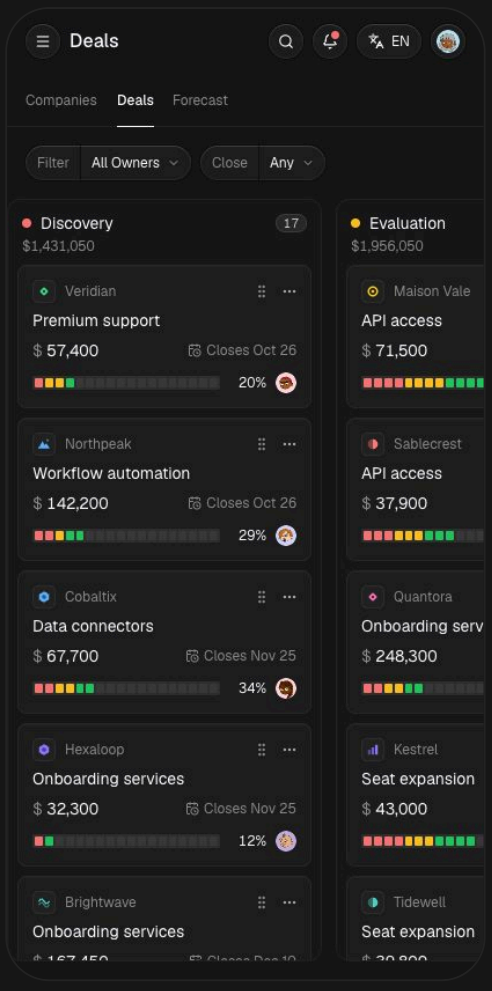

1. Open a sequence to see its steps, a preview and who's enrolled.
2. Write steps with variables like **first_name** or **company**. The preview fills them in for a real contact.
3. **Enroll Contacts** adds people. Their calls and tasks show up in Activities.
4. When someone answers, use **Mark as replied** and the sequence stops for them.

08

About this demo

Everything runs in your browser, with fictional companies and people.

1. Changes are saved in this browser. Dates move forward every day, so the demo never looks stale.
2. **Reset demo data** in the sidebar brings everything back, with undo.
3. It works on phones too: filters move into a bottom sheet and the board scrolls sideways.
4. Built with Next.js, React, TypeScript and Tailwind CSS. The code, and how it's built, is on GitHub.
